Week ending June 19, 2026

US equity markets advanced over the week, driven by growing optimism surrounding a U.S.–Iran peace agreement — formally signed by President Trump on June 17th at the G7 summit in Versailles — that raised expectations for a reopening of the Strait of Hormuz and an easing of energy supply disruptions that have weighed on markets since the start of the conflict. The S&P 500 rose 1% as investor sentiment improved alongside declining oil prices, supported by strength in the Technology and Industrials sectors. Treasury yields were mixed, with longer-dated yields declining modestly, reflecting some easing of near-term inflation concerns as the prospect of a Hormuz reopening came into view. At his first Fed meeting as Chair, Kevin Warsh held rates steady while signaling a firm commitment to the Fed's 2% inflation target, reinforcing a more hawkish policy stance. May retail sales rose 0.9% month-over-month, exceeding the 0.6% consensus estimate and marking a fourth consecutive gain, signaling continued consumer strength despite elevated gasoline prices and broader inflation pressures. Taken together, last week highlighted a market navigating a complex backdrop, as easing geopolitical tensions, falling energy prices, and resilient consumer spending provided support, even as persistent inflation and a more hawkish Fed continue to pose meaningful risks.

## Fixed Income Markets Overview

- The Treasury yield curve flattened as short-term yields rose while long-term yields declined, reflecting a more hawkish stance from the Federal Reserve.
- The 2-year Treasury yield rose 10 basis points to 4.19%, the 10-year yield declined 2 basis points to 4.46%, and the 30-year Treasury yield fell 7 basis points to 4.90%.
- Declining energy prices, driven by the signing of the US-Iran memorandum of understanding and early signs of increasing oil flows through the Strait of Hormuz, put downward pressure on longer-dated Treasury yields throughout the week.
- The Fed's GDPNow estimate edged lower over the week, dropping from 3.1% to 3.0%, suggesting a modest softening in the near-term growth outlook.

## Equity Markets Overview

- US equity markets posted broad gains for the week, with the S&P 500 rising 1%, the Nasdaq Composite gaining 2.4%, and the Dow Jones Industrial Average advancing 0.7%.
- A key theme of the week was progress toward — and ultimately the signing of — the US-Iran peace agreement, which drove a notable rotation into technology and other growth-oriented sectors while energy stocks lagged sharply as oil prices declined on expectations of a Hormuz reopening.
- Information Technology led sector performance with a gain of 3.1%, followed by Industrials with a 2.6% advance, while Energy fell 6.6% and Real Estate declined 3.4% as the week's worst performers.
- Investor risk appetite improved over the week, driven by the combination of geopolitical optimism and easing energy prices, though investors remained cautious given the Fed's increasingly hawkish posture and the uncertain trajectory of inflation.
